Proposal for Business Growth Enablement

Submitted to: Munchable.tv
Submitted by: DeepThought CultureTech Ventures Pvt. Ltd.

1. Engagement Overview

DeepThought (DT) proposes to deploy a full-time **DT Fellow (Business Analyst)** to function as a **Full-Stack Operator**. The Fellow integrates three layers of responsibility into a single point of accountability:

Layer 3 (Strategy): Translating management's vision into actionable plans.
Layer 2 (Management): Self-managing tasks, identifying bottlenecks, and course-correcting.
Layer 1 (Execution): Hands-on operational work and project coordination.

Core KPIs: C-SAT (Customer Satisfaction), TAT (Turn Around Time), and Project Completion Rate.

2. Scope of Work (SOW)

The Fellow will take ownership of the following for Munchable.tv:
Account Management: Requirements gathering and client relationship maintenance.
Internal Coordination: Bridging the gap between strategy and the production team.
Operations: Designing and executing systems for lead discovery and automated outreach.

3. Responsibilities

3.1 DeepThought's Responsibilities

L&D Provision: DT is responsible for the continuous Learning & Development of the Fellow, ensuring they apply "First Principles" to the Client's business.
Replacement Guarantee: DT shall provide a replacement Fellow if the Client makes a formal request based on performance or cultural misfit.
Feedback Integration: DT will take timely feedback from the Client to calibrate the Fellow's strategic logic and operational output.

3.2 Client's Responsibilities

Strategic Access: Providing the context and goals necessary for the Fellow to build "Layer 3" plans.
Daily Supervision: While the Fellow is self-managed in terms of workflow (Layer 2), the Client is responsible for the final supervision of the work produced and confirming it aligns with company standards
Tools & Access: Providing necessary access to software, data, and internal communication channels.

4. Engagement Guardrails & Clauses

Non-Poaching: The Client agrees not to solicit, hire, or engage the DT Fellow directly as an employee or independent contractor during the engagement and for a period of 24 months following its termination.

Confidentiality: All systems and workflows built by the Fellow for Munchable.tv remain the exclusive intellectual property of the Client.

5. Strategic Onboarding Offer

To bring in immediate alignment and maximum ROI, we provide a specialized **Blueprint Service** for multi-hire engagements:

- **Eligibility:** This offer is applicable if the Client engages **two (2) DT Fellows**.
- **Complimentary Value:** DeepThought will provide the **Blueprint Service (valued at ₹50,000)** as a complimentary package to kickstart the relationship.
- **The Methodology:** The DT core team will conduct a **Root Cause Analysis (RCA)** and **Current State Assessment (CSA)** of Munchable's existing project workflows.
- **The Objective:** We define a bespoke operating system before the Fellows are deployed. This ensures the hires are onboarded into a structured environment with clear logic, significantly increasing Day-1 productivity and ensuring a seamless transition into your team.

5. Pricing & Commercial Terms

- **Monthly Retainer:** ₹40,000 per candidate per month
- **Commitment:** 12 Months
- **Advance:** 1-month retainer (₹40,000) payable before project start.
  The Advance (non-refundable) shall be adjusted with the 12th month invoice
- The candidate shall be interviewed and approved by the client before project deployment
- **Invoicing:** Raised at the beginning of each month; payable within 7 days.

6. Acceptance

The engagement begins upon receipt of the one-month advance.

Operational Structure: The DT Fellowship

The DT Fellow is a self-managed operator who functions across three operational layers. By integrating these layers, the Fellow reduces the Client's internal requirements for project management and strategic translation.

1. Functional Layers of the Role

Layer 3: Strategic Planning: The Fellow interprets top-management objectives and converts them into actionable project plans. This minimizes the Client's need to provide granular direction or logic for new initiatives.

Layer 2: Operational Management: The Fellow manages the workflow, including task breakdown, bottleneck identification, and real-time course correction. This self-management layer reduces the Client's supervisory burden.

Layer 1: Execution: The Fellow performs the primary work functions and technical tasks required to meet the project's defined KPIs.

2. Efficiency Model

The Fellowship model is designed to consolidate the traditional three-tier hierarchy into a single point of delivery:

Layer	Traditional Client Requirement	DT Fellow Responsibility
Layer 3 (Strategy)	Client must design the plan.	**Fellow** designs the plan.
Layer 2 (Management)	Client must supervise and troublesho	**Fellow** self-manages and corrects.
Layer 1 (Work)	Junior staff executes tasks.	**Fellow** executes tasks.

3. Service Impact

- **Minimized Management (Layer 2):** Because the Fellow identifies and resolves bottlenecks internally, the requirement for Client-led project management is significantly reduced.
- **Systems Integration (Layer 3):** As systems thinkers, Fellows align their daily output with the Client's long-term strategy, ensuring that operational work supports high-level business goals without constant realignment meetings.

The L&D Framework: Enabling Full-Stack Performance

The ability of a DT Fellow to operate across Layers 1, 2, and 3 is a direct result of the **DT Learning & Development (L&D) Program**. This training replaces traditional "on-the-job" learning with a structured methodology designed to produce self-managed experts.

1. Skill Acquisition by Layer

The L&D program focuses on three core competencies that align with the service model:

First Principles Thinking (Layer 3): Fellows are trained to decompose high-level business goals into their fundamental components. This allows them to build implementation plans and customized templates rather than sticking to existing templates.

Systems Thinking (Layer 2): The curriculum covers project auditing, bottleneck identification, and workflow optimization. This enables the Fellow to recognize and fix inefficiencies before they require Client intervention. This helps them think holistically and avoid siloed thinking.

Technical Proficiency (Layer 1): Fellows undergo rigorous training in the specific tools and platforms (Google Sheets, Appscript) required to execute the daily work.

2. The "Home-Grown Expert" Pipeline

By the time a Fellow is deployed, the L&D program has institutionalized the following behaviors:

Self-Correction: The training emphasizes "active feedback loops," where the Fellow reviews their own output against KPIs, minimizing the need for Client-led Layer 2 supervision.

Strategic Alignment: Fellows are taught to view every task through the lens of the Client's ROI, ensuring that Layer 1 work consistently serves Layer 3 objectives.

3. Impact on Client Resources

The DT L&D process is designed to shift the training and management burden from the Client to the Fellowship.

Feature	Traditional Junior Hire	DT Fellow (via L&D)
Training Burden	Borne by the Client.	Pre-managed by DT L&D.
Strategic Logic	Relies on Client instructions.	Derived from First Principles.
Management Input	High (Daily check-ins).	Low (Self-managed).
